

Knickerbocker on the Lake  
Condominium Association, Inc.

September 15, 2003

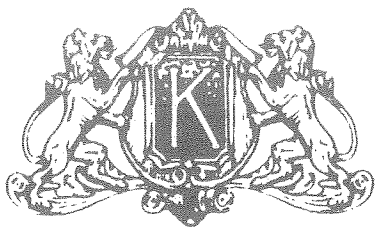

Dear Jeff:

First of all, I want to personally Thank You & your fantastic staff for the absolutely awesome cleaning job on our air handling system. What a huge difference!

Our air handling system was installed when Moses was around and had never been cleaned. We estimated that the filth in our ductwork was 40 - 50 years thick. Until you opened the system and gave us a first-hand look at it, we had no idea how bad it really was. It was a very daunting task ahead of you.

It is a huge system, but you and your staff attacked the job in the most professional manner! You were very sensitive to needs and concerns of our tenants, always being able to work around their schedules. You ran into obstacles and were able to work them through - what an impressive team you have!

The end result was an exceptionally clean air handling system! For us, having the ability to see directly into the ductwork and seeing the wonderful results of all your hard work was just impressive!!

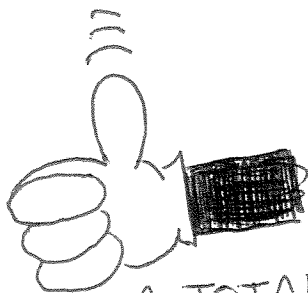

Knickerbocker on the Lake  
Condominium Association, Inc.

It is a rare instance to have a contractor come in, tackle a massive (and filthy) task like our system, have absolutely FANTASTIC results, overcome the adversity that our building is famous for and still have you and your staff go the extra TWO miles for us! I just could not ask for more. I definately hired the RIGHT company! Bravo!

Once again, our sincerest  
gratitude & Thanks!

Chris Stepanski

**Subject:** NCR - Viroqua Plant dust removal

Dear Jeff,

I just wanted to say thank you for the very thorough, professional job you and your team completed at our facility. Being in a printing environment, the dust accumulation over many years can become considerable, especially in the area where all of our paper and related raw material waste is collected. Working in the part of the plant where the dust was the most concentrated, you and your team were able to successfully remove the dust build-up in a fashion that caused minimal disruption to our production floor. This is especially appreciated since our plant operates 24 hours a day, seven days a week.

I would highly recommend Clean Air Technologies, Inc. to other manufacturing operations looking for the type of dust removal that we required. Your dedication and expertise made this large project a success for the Viroqua plant.

Thanks again for a job well done.

Regards,  
Mike Hoida
